

Class Heater – heater-exercise

1/1

```
1 public class Heater
2 {
3     // instance variables - replace the example below with your own
4     private double temperature;
5
6     /**
7      * Constructor for objects of class Heater
8      */
9     public Heater()
10    {
11        // initialise instance variables
12        temperature = 15.0;
13    }
14
15    public void warmer()
16    {
17        temperature += 5.0;
18    }
19
20    public void cooler()
21    {
22        temperature -= 5.0;
23    }
24
25    public double getTemperature()
26    {
27        return temperature;
28    }
29
30 }
```
